

Wavestore Recording Solutions

Wavestore recording solutions are designed to record combinations of analogue, megapixel and IP (network) cameras. Multiple cameras (having different protocols) can be recorded, viewed and copied to DVD simultaneously.

A range of chassis options are offered, from compact IP only designs through to a 16TB unit; configurable as direct attached storage (DAS) or Network attached storage (NAS).

All recorders are based on the same system software, enabling multiple recorders to be seamlessly integrated to create a single camera network.

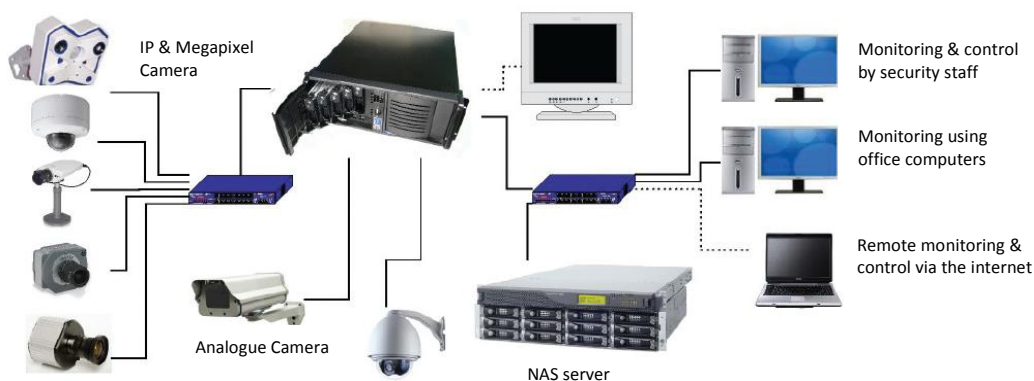

The design includes many innovative design features including drop-down lists for easy camera install, and hard drive detection and configuration dialogues to simplify installation. A dual Gigabit network option can be configured to reduce the video loading on corporate networks.

Features include:

- Dependable Linux operating system
- Windows license, firewall and anti-virus software is not required
- Analogue, hybrid and IP camera recording capability
- Supports Wavelet, M-JPEG, MxPEG, MPEG-4 and H.264 protocols
- Record from multiple cameras with different protocols simultaneously
- Very fast "image find" capability, even from many terabytes of archived data
- Remote monitoring from a Windows PC standard
- Direct attached storage (DAS) or Network attached storage (NAS) options
- Remote diagnostics and repair capability
- Triple data recording options – prime, time-lapse and alarm
- Secure user access and profile management
- Upgrade-able and expandable camera network and data storage
- Ability to create large networks (hundreds of cameras and microphones)
- Remote monitoring and management functionality
- UK design and manufacture with real-time technical support & installation assistance

Hybrid Network Recording Solution with Optional NAS Storage
